

ASC BUSINESS GROUP

11th November 2021

Queens Room, HAC, Armoury House, City Road, London, EC1Y 2BQ

10.30—11.00 —Registration

11.00—11.15 - Welcome to the ASC Business Group

11.15—12.00— Michael Lee PSP, NEDAP—‘**GovPass and high secure solutions for Government authorities**’.

- A brief history of Nedap
- The Government landscape and its challenges
- Govpass; what is it and how does it work?
- From physical to cyber
- Other considerations

12.00 —12.30—Coffee & Networking

12.30—13.15 — Andrew Palmer, Seagate—‘**The challenges of data sprawl**’

The world's data is rapidly expanding exponentially. From around 30 zettabytes now, to 175 zettabytes in 5 years-time, it's not just the sheer size but also the complexity of where that data is stored. Andrew Palmer, Enterprise Storage lead for Seagate, talks about the challenges of data sprawl and proposes a 5 point plan that enterprises can deploy right now to overcome this challenge.

13.15—14.00 — Steve Kenny, AXIS—**CyberPhysical Security - Are your security systems a cybersecurity risk to your organisation?**

With the ever-increasing converged security approach and the emerging cybersecurity threats increasing through supply chains and IoT vulnerabilities, should we not consider the evaluation of our physical security vendors' cybermaturity equally as important as the technical features? With a focus on physical security technologies, understand what consideration should be made when evaluating the security of your security partners.

- How has the pandemic impact the way you operate your security systems?
- Is your security system really the weak link?
- So what if someone hacks my video surveillance systems. What's the worst that can happen?

14.00 —14.30— Lunch & Networking
